LANDFIRE Public Exotics Data Dictionary

Attribute		Description
EventID	*Required*	LANDFIRE unique identifier for exotics sampling event.
Source_Code	*Required*	LANDFIRE internal source code assigned to each data source.
PolyID	*Required*	LANDFIRE unique identifier for each polygon location in the original dataset.
YYYY	*Required*	Year (YYYY) in which the event was sampled.
MM		Month (MM) of this sampling event.
DD		Day (DD) of month sampled.
Tax1		Scientific Name from the NRCS (Natural Resources Conservation Service) Plants Database ca. January 2004 for the most prevalent exotic plant.
Cov1		Absolute cover (%) of Tax1. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax2		Scientific Name from the NRCS Plants Database ca. January 2004 for the second most prevalent exotic plant.
Cov2		Absolute cover (%) of Tax2. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax3		Scientific Name from the NRCS Plants Database ca. January 2004 for the third most prevalent exotic plant.
Cov3		Absolute cover (%) of Tax3. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax4		Scientific Name from the NRCS Plants Database ca. January 2004 for the forth most prevalent exotic plant.
Cov4		Absolute cover (%) of Tax4. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax5		Scientific Name from the NRCS Plants Database ca. January 2004 for the fifth most prevalent exotic plant.
Cov5		Absolute cover (%) of Tax5. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax6		Scientific Name from the NRCS Plants Database ca. January 2004 for the sixth most prevalent exotic plant.
Cov6		Absolute cover (%) of Tax6. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax7		Scientific Name from the NRCS Plants Database ca. January 2004 for the seventh most prevalent exotic plant.
Cov7		Absolute cover (%) of Tax7. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax8		Scientific Name from the NRCS Plants Database ca. January 2004 for the eighth most prevalent exotic plant.
Cov8		Absolute cover (%) of Tax8. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax9		Scientific Name from the NRCS Plants Database ca. January 2004 for the ninth most prevalent exotic plant.
Cov9		Absolute cover (%) of Tax9. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Tax10		Scientific Name from the NRCS Plants Database ca. January 2004 for the tenth most prevalent exotic plant.
Cov10		Absolute cover (%) of Tax10. If no cover reported, the following categories indicate level of infestation: P = present, L = low, M = moderate, H = high.
Total		Total number of exotic plant taxa reported for this sampling event.
